

ABSTRACT

Information appliance, computing device, or other processor or microprocessor
5 based device or system provides security and anti-viral, anti-hacker, and anti-cyber
terror features, and can automatically create multiple sequentially or concurrently and
intermittently isolated and/or restricted computing environments to prevent viruses,
malicious or other computer hacking, computer or device corruption and failure by
using these computing environments in conjunction with restricted and controlled
10 methods of moving and copying data, combined with a process that destroys
malicious code located in computing environments and data stores.
